To Whom It May Concern

I had the pleasure of working with Maystar General Contractors (“Maystar”) on the “Combined Heat & Power Generation Project (“COGEN”) at the Sunnybrook Health Sciences Centre Bayview Campus.

The scope of the contract was the Construction of a new building to house a Gas Turbine Generator (GTG), Heat Recovery Steam Generator (HSRG), Fuel Gas Booster Compressor (FGBC), new transformers, switch gear system, deaerator, feed water pumps and various auxiliary equipment.

The project had extreme pressure to have the system generating power by December 2020 to qualify for incentives from Toronto Hydro. The hospital had proactively pre-selected the major equipment suppliers whose contracts were then transferred to Maystar to manage the install and integration overall.

Maystar worked very closely with the Hospital and the Project Consultants to meet the incentive deadline by reorganizing activities, fluctuating additional manpower, and working extra shifts. The system that Maystar completed was highly complex and required endless hours of review and coordination.

I look forward to working with Maystar General Contractors on future build projects, as their approach was professional and very organized, and both their site & office staff are courteous with positive attitudes.

Thank you,
